

Global Energy Partners

Putting People First Since 1948

The Right Safety The Right People The Right Solutions The Right Performance

— The Right Choice —

GIS AT A GLANCE

Established in 1948 in Grand Isle, Louisiana, GIS began as a modest company serving the commercial fishing industry. It quickly evolved, entering into the emerging Oil & Gas industry in the Gulf of Mexico. Just as its founders, Clyde and Ouida Pregeant responded to clients' ever-changing needs, GIS has advanced and diversified to become one of the industry's most capable and trusted energy partners.

Today, GIS services the oil and gas industry nationally and internationally. With over 2,000 employees, 19 strategically located facilities, and 21 service lines, GIS has the resources to span the complete life cycle of our customers' projects, and the capability to provide solutions in the upstream, midstream, and downstream markets. We align our services with operations from the development stage of major projects, through construction, commissioning, and ultimately de-commissioning.

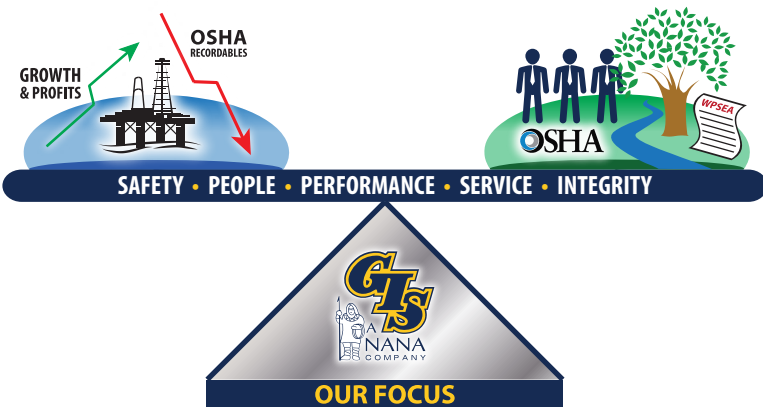

Did you know? GIS is a Minority Business Enterprise (MBE), as certified by the National Minority Supplier Development Council.

GIS MISSION

To provide quality products and services to our customers in a safe and environmentally sound manner at fair and competitive prices.

GIS VISION

To be considered among the premier service companies in the energy and construction industry by our customers, neighbors and governmental agencies as we maintain and promote the proper balance between safety, quality and profits while people and the environment remain our highest concern and most valued.

SAFETY | PUTTING PEOPLE FIRST

LIFE is the proactive, operational, and behavior-based component of GIS's comprehensive safety management program. While our Corporate HSE group focuses on compliance, training, and incident response, the LIFE processes specifically cover Operational Safety, through: comprehensive work planning; increasing awareness of work area & task risks; intervention techniques for redirecting at-risk behaviors; embedded field presence; quarterly initiatives focused on observed areas of risk; and visible leadership engagement.

TRAINING | A SMARTER WORKFORCE

ITEC, our Industrial Training Educational Center, is accredited by numerous organizations recognized by the petroleum industry. ITEC is designed to offer training required to comply with all workforce personnel, and provides custom-tailored training services not only to GIS, but to other companies as well. With a list of over 100 course offerings, our qualified staff and state of the art facility provides the most up to date training available, well above and beyond the commonly accepted industry standards.

QUALITY | EXCEEDING STANDARDS

GIS's Quality Management System (QMS) is a stand-alone ISO-9001 certified process, the objectives of which are to demonstrate our ability to provide products and services that meet customer and applicable statutory or regulatory requirements, and to enhance customer satisfaction through effective control of processes and continual improvement of systems.

GIS PROJECT EXPERIENCE

The hallmarks of GIS's success are completing quality projects on schedule and achieving our cost targets. We consistently prove the effectiveness of our project planning and management system through successful project execution. GIS has performed as both a general and sub-contractor in upstream, midstream, and downstream environments, providing a wide array of self-performed services, and working alongside other contractors from many diverse disciplines.

Shell MARS Platform Recovery

The Shell MARS Platform was significantly damaged by Hurricane Katrina's 170 mph sustained winds and eighty-foot waves. GIS provided 360 personnel, produced all ISO drawings, designed all work packages, managed all Intelligent Connected Piping. GIS managed its own crews as well as the crews of two other companies, and provided all necessary tools and equipment. With this project, GIS was not only able to help return the largest producing platform in the Gulf of Mexico back to service, but did so ahead of schedule.

Chevron Mabee Project

GIS installed NGL Recovery Equipment at the Chevron Mabee CO₂ Compression Facility in Midland, TX, with all construction taking place inside an existing operating plant. In addition to being the single qualified contractor for all three phases of work, GIS self-performed all civil work, piping connections, setting of equipment skids, electrical & instrumentation, as well as start-up and commissioning.

Kinder Morgan Compression Stations 9, 110, 301, & 302

GIS provided turn-key construction services at four compression stations in the Utica & Marcellus Shale Regions of Kentucky, Pennsylvania, and Ohio. These projects illustrate GIS's ability to simultaneously perform multiple capital projects of varying size, scope, and conditions, while maintaining the quality and safety standards that our customers have grown to expect.
